Main Connector

The main connector on the microchip laser module provides different input and output signals such as power input, auxiliary power output, trigger-I/O and serial communication via UART.

The connector on the microchip laser module is a Molex 504050-1291.

The connector can be used with a matching cable assembly, Molex 15132-1203.

The following table describes all the interface pins. Contact us for custom pinout.
